How to run android apps on surface pro. Can i run android apps on surface pro. Android on surface pro 3.

This article covers the must-have apps for Surface Pro 7 users looking to get the most out of their new Microsoft Surface device. Programs range from the best drawing app for Surface Pro 7 to some of the more popular Windows 10 apps for consuming audiobooks, podcasts, and movies. We also included a couple of the best productivity apps.

Audiobooks from Audible is one of the best apps for Surface Pro 7 for listening to audiobooks. This free Windows 10 app fully syncs your Audible audiobook library from your Amazon account and remembers where you left off on different titles no matter what device you were previously using. You will need to be connected to the internet for audiobook progress to sync between devices. In many ways, this Windows 10 Audible app is much easier to use than the mobile versions on iPhone and Android as the larger screen on the Surface Pro 7 allows for more titles to show on the screen at the same time. It makes finding the audiobook you're looking for much easier, especially if you have difficulty reading the text or controls on your smartphone. The only negative thing to say about Audiobooks from Audible is the Stats screen, and its badges are a bit awkward to navigate. Neither is used much by users, though, so this likely won't inconvenience many. Download For: If you like to listen to many podcasts and music, the Windows 10 Spotify app is a must-have. Spotify Music syncs all of your Spotify playlists, favorites, and preferences from the mobile app, making it great for existing users who frequently switch devices. You can also use this app to play locally stored audio tracks that have been downloaded or transferred to your Surface Pro 7 from somewhere else. You can listen offline if you have an active Spotify Premium subscription. One of the coolest aspects of the Windows 10 Spotify app is that it can connect to Facebook and display a live feed of what your friends are listening to. If they're online, their name, photo, and current track or podcast episode will appear at the top of the list. If they're offline, they'll appear under the online friends in order of most recent activity. All of the track information is clickable, so you can check out what they're into with a single click. It's an excellent feature for those wanting to feel more connected to others or are looking for something new to listen to. Download For: Adobe Photoshop Express is an entirely free Photoshop app designed for those who need to do some basic image editing before sharing a photo with friends and family or posting it on social media. While Windows 10's native Photos app does feature some basic image editing functionality, Adobe Photoshop Express is still one of the best apps for making changes to photos on Surface Pro due to its wide selection of tools and filters. In addition to the usual crop tool and filters, Photoshop Express also boasts red-eye removal for both humans and animals, a blemish removal tool, and default image sizes for specific use cases such as Facebook cover images, Twitter headers, and Pinterest posts. Download For: Sketchable is considered by many to be one of the best drawing apps for Surface Pro. It features a massive set of digital painting tools which you can use to make a quick sketch or produce incredible artwork intended to be sold or displayed in a professional setting. Sketchable is designed to work with Surface devices, such as the Surface Pro 7, and features full support for the Surface Pen stylus for both art creation and navigating the app's menus and UI. Sketchable truly is a Windows 10 app that allows you to disconnect your Type Cover and mouse and fully use your Surface Pro 7 as a digital canvas like in the commercials on TV. Download For: When it comes to writing notes on a Surface Pro 7, it's hard to beat OneNote. You can use Microsoft's free app both for quickly jotting down notes and scribbles or for creating more comprehensive plans, recipes, and checklists. OneNote supports input via your Type Cover keyboard, touch, or a stylus such as the Surface Pen, and all changes automatically save to the cloud seconds after being made. All notes made in OneNote on your Surface Pro 7 sync for free to the mobile version of OneNote on your iPhone or Android smartphone and vice versa, which makes it a genuinely convenient tool for keeping track of information and ideas wherever you are. Download For: The official Windows 10 Netflix app is one of the best apps for Surface Pro 7 owners looking to watch movies, TV series, and documentaries. Users can log in with the same Netflix account they use on other devices and either stream content when connected to the internet or download videos for viewing offline. You can use your Netflix account and this app to watch content when traveling abroad. The available library will automatically change to match the country you're in, which can be a great way to discover local shows and films when on holiday. The latter functionality is beneficial when traveling or if your internet connection is too slow to stream media properly. You can delete all downloaded media either manually or automatically by using the rather clever Smart Downloads setting. This feature cleverly erases episodes or films after you finish watching them and downloads the next one in the series so you can keep watching. Download For: Your Surface Pro 7 comes pre-installed with two excellent email and calendar apps, appropriately called Mail and Calendar, respectively. Each app is completely free to use and, while made by Microsoft, works with email accounts and schedules from other services such as Gmail and Yahoo Mail. You can switch email accounts and calendars via the left navigation menu. All your scheduled appointments are also viewable right away, so you don't miss anything important. One of the best aspects of these must-have apps for Surface Pro 7 is all of the changes made will sync to your Microsoft account, so, for example, if you create an event in Calendar on your Surface Pro 7, it will be mirrored on your Outlook phone app. Download For: FAQ Is the Surface Pro 7 a good laptop replacement? The Surface Pro 7 comes closer to being a suitable laptop replacement than some of its competitors, including the iPad. It's powerful enough to handle emails, web browsing, streaming, and even light photo editing. All Windows apps should work on the Surface Pro 7, although it won't replace a gaming laptop. How do you take a screenshot on a Surface Pro 7? There are multiple ways you can take a screenshot on a Surface tablet. One method is to long-press the Power and the Volume Up buttons simultaneously. Or, you can long-press the Prt Sc key on your keyboard or use the keyboard shortcut Fn+Windows key+Spacebar. How do you connect AirPods to a Surface Pro 7? To connect your AirPods to a Surface Pro 7, place the AirPods into pairing mode by opening the case. Then, go into Settings and select Devices > Add Bluetooth & other devices > Bluetooth. Select your AirPods in the list of available devices, then long-press the Sync button on the AirPods case until the buds are connected. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! You probably don't do a lot of multitasking on your PlayStation 4, but sometimes you just need to flip back and forth between a pair of apps (or an app and a game). Fortunately, there's a fast and easy way to do this. RELATED: What's the Difference Between the PlayStation 4, PlayStation 4 Slim, and PlayStation 4 Pro? Before we get into it, however, I want to point one thing out: you still can't use this to jump between games. The PlayStation 4 (and Pro) will only allow one game at a time to run. Period. Sorry to all the ADHD gamers out there. Alright! So this is a setting that's actually already enabled by default, meaning you don't have to do anything to use it. Are you ready for this? With the two apps you want to switch between running as the most recent, just tap the PS button on the controller twice. Seriously, that's it. Just a little tap-tap-taparoo. I'm ashamed to admit how long it took me to realize this feature even existed after having both the original PS4 and the Pro. Hopefully this will save you the same shame. That's me looking out for you. But if you already knew...why didn't you tell me? I thought we were friends. There's no shortage of exercise trackers in the Market these days, but if you're looking for something fully-featured, comprehensive, and user friendly, Endomondo Sports Tracker PRO is the way to go. To start, Endomondo gives you an incredibly expansive list of activities to track. You're not limited to just running or biking with this app. It covers things like badminton, baseball, yoga, and kayaking, just to name a few. If there's something that gets your heart rate going, Endomondo probably tracks it. Endomondo also supports full GPS tracking while you exercise, so if you are doing something mobile and outside, Endomondo can tell you your average mile pace, total distance covered, and time spent working out. It can also give you an estimate of calories burned, based off of your weight and pace. Endomondo also supports Bluetooth heart rate monitors (my favorite part!) so you can check if you're hitting your target heart rate during exercise. Pairing is simple and once you've paired once, Endomondo will automatically sync up when the app is opened. The app also keeps a saved history of all your workouts, so you can compare times against older workouts to see if you're improving, but if you have to wipe your phone, your list will disappear. All of your workouts get automatically uploaded to your workout portal on Endomondo's website, but syncing from website to phone isn't possible. Endomondo also boasts a social aspect to exercise, so you can friend other people using the app and see when they start working out as well as checking out their results when they're done. You have the option (from the website) to send messages to your friends that are in-progress, so feel free to trash talk or send words of encouragement. Just know your friend will hear these messages read out to them while they exercise and they might return the favor. You can also set the app to automatically share your results with Facebook or Twitter, or you can manually share from the website. Endomondo PRO adds in the option to try and beat your own (or someone else's) time on a given workout, and the audio coach will give you periodic updates as to how you're doing on your goal. It seems like a simple thing, but when you're striving for a better time (on say, a 5K), it's a huge help to get continuous, real-time feedback on your performance. Endomondo PRO is, in my opinion, the king of exercise tracking. At ~\$4.26, it's definitely not free, but for how detailed and well-maintained the app is, it's a small price to pay, especially if you're serious about getting in shape. Maybe you could skip your morning coffee one day to pay for it and go running instead. Give it a try! Your body will thank you for it. More pictures and download links after the break.
